

MIHIR LOTIYA

Senior Data Engineer | ETL & Data Integration | SnapLogic | Salesforce | AWS

Pune, Maharashtra | mihirlotiya66@gmail.com

PROFESSIONAL SUMMARY

Senior Data Engineer with 4+ years of experience at LTIMindtree, specializing in backend data engineering, ETL development, data integration, production support, and workflow automation. Hands-on experience with SnapLogic, Veeva Salesforce, Salesforce, Amazon S3, Splunk, SQL, SOQL, Postman, and configuration-driven data pipelines. Experienced in designing reusable ETL solutions, configuring and scheduling SnapLogic tasks, integrating data pipelines with downstream REST services, testing API endpoints using Postman, and troubleshooting complex integration issues. Working knowledge of Python, with practical exposure to automation using Selenium, and currently expanding skills in Artificial Intelligence and Machine Learning.

PROFESSIONAL EXPERIENCE

LTIMindtree | Senior Data Engineer | Jan 2026 – Present

Client: AstraZeneca | Total Experience: 4 Years (Aug 2022 – Present)

- Provided production support for existing integrations, resolving defects and incidents and delivering enhancement requests across AstraZeneca data integration workflows.
- Analyzed and resolved data integration, transformation, and Veeva/Salesforce loading issues by conducting root-cause analysis and implementing corrective solutions.
- Enhanced and modified existing ETL pipelines to support evolving business and integration requirements.
- Optimized SnapLogic pipelines to improve performance, reliability, maintainability, and scalability.
- Collaborated with cross-functional teams to troubleshoot integration issues and deliver defect fixes and enhancements within agreed timelines.
- Implemented task scheduling and API-based workflow triggering in SnapLogic, using Postman for REST endpoint testing, request validation, and response verification.
- Developed pipeline integrations that transmitted validated data to downstream applications through REST API endpoints.

Automated Veeva Sandbox Refresh – SnapLogic, Selenium, Mule & AWS

- Designed and developed pre-refresh and post-refresh automation, eliminating manual intervention in Veeva Salesforce sandbox refresh activities.
- Built configuration-driven parent-child SnapLogic pipelines to dynamically process multiple Veeva objects, operations, SOQL queries, and field mappings.
- Automated Veeva Salesforce data extraction into Excel backup files and secured them in Amazon S3 for post-refresh processing.
- Implemented configuration-based data loading into Veeva using Upsert, Create, and Delete-Insert operations.
- Developed dynamic field mapping from Excel headers and control files, minimizing hardcoded mappings and improving pipeline reusability.
- Utilized SnapLogic scripting capabilities and expression language to perform complex data transformations, implement business rules, and maintain required data sequencing and dependency handling across multiple objects.
- Managed object dependencies by processing User data first and dynamically resolving User-related Salesforce IDs for dependent objects.
- Integrated Selenium-based automation with SnapLogic workflows and contributed to the integration of Mule-based password-reset functionality within the post-refresh process.
- Implemented success and failure handling, consolidated Excel reports, email notifications, and execution-status tracking in Veeva.
- Optimized automation workflows to improve execution efficiency and reliability while reducing operational effort.

Data Engineer | Aug 2022 – Dec 2025

HCP360 – Backend Data Integration & Analytics Platform

- Developed and maintained backend ETL pipelines using SnapLogic to extract, transform, validate, and load data into Veeva Salesforce for consumption by the HCP360 analytics platform.
- Worked on source-system migration and integration changes to ensure accurate data flow into Veeva and downstream analytics.
- Integrated new channel source data with existing customer interaction data using SnapLogic ETL pipelines.
- Designed complex mappings and transformation logic using SnapLogic Snaps to produce optimized outputs based on business requirements.
- Developed and optimized SOQL and SQL queries for efficient Salesforce data retrieval, validation, reconciliation, and troubleshooting.

- Resolved data integration and loading issues across SnapLogic, Salesforce/Veeva, S3, and downstream systems.
- Enhanced and optimized existing pipelines for performance, reliability, maintainability, and scalability.

Automated Log Ingestion & Monitoring – SnapLogic & Splunk

- Designed and implemented SnapLogic pipelines to ingest structured and unstructured application/job logs into Splunk.
- Implemented custom field extraction, indexing, source types, and monitoring logic to improve log searchability and troubleshooting.
- Used Amazon S3 for file storage and retrieval as part of log ingestion workflows.
- Created Splunk dashboards and alerts for monitoring job execution, data loads, and system-to-system transfers.
- Optimized SnapLogic pipelines and log-forwarding workflows to improve processing performance and operational visibility.

TECHNICAL SKILLS

Data Engineering: ETL, Data Integration, Data Transformation, Data Validation, Data Migration, Data Quality, Configuration-Driven Pipelines

Integration & APIs: REST API Integration, API Endpoint Testing, Postman, HTTP-Based Data Transfer, Task Scheduling, Workflow Automation

Tools & Platforms: SnapLogic, Salesforce, Veeva CRM, Splunk, Selenium, Mule, Amazon S3, AWS

Databases & Querying: SQL, PostgreSQL, SOQL, Redshift

Programming: Java; working knowledge of Python, JavaScript, and C++

Other: Unix/Linux Basics, Monitoring and Automation, Talend, HTML5, CSS, AI/ML Fundamentals

EDUCATION

Dr. D.Y. Patil University | Pune

Computer Engineering | June 2022 | CGPA: 9.18

Dr. D.Y. Patil University | Pune

Honours in Data Science & Artificial Intelligence | June 2020-June 2022 | Grade: A+

TRAINING & ACHIEVEMENTS

- Completed LTIMindtree LBJ industry-readiness program covering Java, Python, SQL, HTML, CSS, JavaScript, and software engineering fundamentals.
- Received Appreciation Certificate for emerging as a Star Performer during LBJ training.
- Completed industry-oriented training involving coding challenges, assessments, and mini-projects.
- Completed a **10-month, industry-oriented EPAM training program** covering software engineering principles, Java, HTML, CSS, build tools, and programming fundamentals.
- Participated in weekly technical sessions, coding challenges, and assessments to strengthen practical software development skills.
- Earned a certificate of completion upon successfully completing the training program.

LANGUAGES

English, Hindi, Gujarati, Marathi
